

Insider Tips: Using the Color Picker

If you've found yourself saying "if only AppStylist had a color picker!" consider this your lucky day. There's actually already a color picker built in, you just overlooked it.

To access the color picker:

1. Click the **custom color** button in the color dialog. The Custom Color dialog will appear.
2. Press and hold your left mouse button in the gray box (highlighted at right) that says "Click here and drag to any location to capture a color from the screen".
3. Enjoy!
